

Setting the industry benchmark for sustainable products

Our cabling provides superior quality while setting the telecommunications industry benchmark for product sustainability through transparency.

We were the first communications cable manufacturer to publish independently verified Environmental Product Declarations (EPDs) and Health Product Declarations (HPDs). Currently 55 of our products have HPDs and EPDs. Both EPDs and HPDs contribute to LEED v4 credits. HPDs also contribute to projects achieving the WELL Building standard.

Superior Essex is the only communications cable manufacturer with certified Red List free products. This means they contain none of the 800 chemicals classed as most harmful to the environment or people by the International Living Future Institute.
